

Live Site QA

UAT & Acceptance Testing Guide

A complete manual test pass for the live production site. Work top to bottom and check each box — every feature lists **how to test it** and the **expected outcome**.

ENVIRONMENT	SECTIONS	TOTAL CHECKS	ACKNOWLEDGEMENTS
Live / Production	A – G	40	reservations@

Before you start

- Use an **email address you control** for all customer-side tests (registration, enquiries, custom quotes). Each one sends a real acknowledgement to that address, plus a copy to reservations@beyondborders.lk.
- Have a **staff/admin account** ready — an email listed in [ADMIN_ALLOWED_EMAILS](#) with a password.
- For payments, know whether the gateway is in **test/sandbox** or **live** mode.
- The automated suite (`npm run test:all`) already covers most of this against the test DB. This guide is the **manual UAT on the live domain**.

A Public site & navigation

6 CHECKS

- ☐ **A1 Home page loads**

TEST Visit the domain root.

EXPECTED Brief intro preloader, then hero, “Our Tour Packages” (3 cards on desktop), destinations, footer. No layout overflow, no console errors.
- ☐ **A2 Header navigation**

TEST Click Home / About / Tours / Destinations / Contact Us; click the BB logo.

EXPECTED Each routes to the right page; logo returns home.
- ☐ **A3 “Create account” button (nav)**

TEST Click it while logged out.

EXPECTED Goes to registration. (No “Sign in” in the nav by design — login is reached from the register page or [/login](#).)
- ☐ **A4 Mobile menu**

TEST On a phone width, tap the hamburger.

EXPECTED Drawer slides in with nav + Create account; tapping a link or the backdrop closes it.
- ☐ **A5 Language switcher (7 languages)**

TEST Switch to العربية / हिन्दी / ಕನ್ನಡ / తెలుగు / اردو / 中文.

EXPECTED Content translates; URL gets the locale prefix (e.g. [/ar/tours](#)); **Arabic & Urdu render right-to-left**. (Machine translations — proof-read separately.)
- ☐ **A6 Cookie banner**

TEST First visit → Accept or Decline.

EXPECTED Banner dismisses and doesn't reappear.

B Lead forms the “contact → reservations + admin” pattern

3 CHECKS

☐ **B1 Contact form** `/contacts`

TEST Fill name, email (yours), phone, country, package, message → submit.

- EXPECTED**
- Success message on the form, **AND**
 - An **enquiry appears in Admin** → **Enquiries** (and the dashboard “Recent enquiries”).
 - An email lands in `reservations@beyondborders.lk` (“New enquiry from ...”).
 - An **acknowledgement email** arrives at the address you entered.

☐ **B2 Custom quote form** `/custom-quote`

TEST Pick an inquiry type (Package / Hotel / Air ticket / Transport), fill the details → submit.

- EXPECTED**
- Success message, **AND**
 - A record in **Admin** → **Custom inquiries**.
 - A staff email to `reservations@`.
 - An acknowledgement to the customer. (SMS is disabled, so no text.)

☐ **B3 Form anti-spam**

TEST Submit a form instantly (under ~2.5s) or many times quickly.

- EXPECTED** Blocked with a “please wait” / too-many-attempts message (bot time-trap + IP rate limit). A hidden honeypot field also silently rejects bots.

C Customer accounts

6 CHECKS

☐ **C1 Registration** `/register`

TEST Fill First/Last name, Country, City, Date of birth, Passport number + expiry, Email (yours), Mobile, Password → Create account.

- EXPECTED**
- Redirected to your **account page showing “awaiting verification”, AND**
 - A **new applicant appears in Admin** → **Customers (“New applications”)** with all details.
 - A “your account is being reviewed” email to the customer.
 - A “new customer to verify” email to `reservations@`.
 - *Edge cases:* future date of birth, expired passport, password < 8 chars, or a duplicate email are each rejected with a message.

☐ **C2 Login** `/login`

TEST Log in with the C1 account. Try the **eye icon** on the password field; try a wrong password.

- EXPECTED** Correct credentials → `/account`; wrong → error, stays on login. Eye toggles visibility. The **back-arrow (top-left)** returns home; “Forgot password?” and “Create an account” links work.

☐ **C3 Forgot password (customer)** `/forgot-password`

TEST Enter your email → receive a **6-digit code** by email → enter it + a new password on the reset page → log in with the new password.

- EXPECTED** Code email arrives (valid ~15 min); valid code + new password → “password updated”, login works; wrong/expired code is rejected.

☐ **C4 Account page** `/account` (logged in)

TEST View it.

- EXPECTED** Greeting with your name, verification status, your bookings list, and a **“Change password”** card.

☐ **C5 Change password from account**

TEST In the account card → “Send verification code” → enter current password, a new password, and the emailed code → submit.

- EXPECTED** Code emailed; on success password changes (log out/in to confirm). Wrong current password or wrong code is rejected.

☐ **C6 Logout**

TEST Sign out.

- EXPECTED** Session ends; protected pages bounce to login.

D Booking & payment

5 CHECKS

- ☐ **D1 Purchase gating (verified-only)**
- TEST** As an **unverified** customer, open a package and look at the reserve area.
- EXPECTED** Instead of a booking form you see a “register / awaiting verification” notice — **unverified customers cannot book**.

- ☐ **D2 Verify the customer (admin step)**
- TEST** Admin → Customers → find the applicant → “**Verify (allow purchases)**”.
- EXPECTED** They move to “Verified” and receive an “**account is verified**” email.

- ☐ **D3 Booking a package** (verified customer)
- TEST** Open `/booking/<package>`, fill travel dates / travellers / notes → submit (wait ~3s first).
- EXPECTED** A **booking record is created** (status *awaiting payment*) and a **payment is initiated**, then you're **redirected to the hosted checkout** (`/pay/<token>`) showing traveller + amount. The booking also appears in Admin → Bookings.

- ☐ **D4 Payment** (test or live gateway)
- TEST** On the pay page, complete the card payment via the MPGS hosted checkout (use a **sandbox test card** if in test mode).
- EXPECTED** Success → a **result page confirming payment**; booking status updates to **paid/confirmed**; an **invoice email** goes to the customer **and reservations@**.

! Verify the amount/currency actually charged — packages display **USD**; confirm the gateway charges the intended currency.

- ☐ **D5 Pay-link expiry**
- TEST** Open an old pay link (older than `PAY_LINK_TTL_HOURS`).
- EXPECTED** Shown as expired; no payment possible.

E Admin panel

13 CHECKS

- ☐ **E1 Admin login** `/admin/login`
- TEST** Log in with an allowlisted staff email; try a non-allowlisted email.
- EXPECTED** Allowlisted → dashboard; non-allowlisted (even with valid Supabase creds) → rejected.

- ☐ **E2 Admin route gating**
- TEST** While logged out, hit `/admin`, `/admin/packages`, `/admin/users`, etc.
- EXPECTED** All redirect to `/admin/login`.

- ☐ **E3 Admin forgot / reset password**
- TEST** `/admin/login` → “Forgot password?” → staff email → 6-digit code → reset.
- EXPECTED** Code emailed to the staff address; reset works; sign in with the new password.

- ☐ **E4 Dashboard**
- TEST** Open `/admin`.
- EXPECTED** A “**Web analytics**” panel (views, unique visitors for 24h/7d/30d, a 14-day trend chart, top pages — see F1), operational metrics (packages/destinations/enquiries/bookings counts), and recent enquiries/bookings.

- ☐ **E5 Packages management**
- TEST** Admin → Packages → open one → edit a field / upload an image → save; create a new package.
- EXPECTED** Changes persist and reflect on public `/tours` and the package page. Newly published packages auto-appear in the sitemap.

- ☐ **E6 Destinations management**
- TEST** Admin → Destinations → edit / create.
- EXPECTED** Changes reflect on `/destinations` and the destination page.

☐ **E7 Enquiries**

TEST Admin → Enquiries → open one → change its status.

EXPECTED The B1 enquiry is listed; status updates persist.

☐ **E8 Custom inquiries**

TEST Admin → Custom inquiries.

EXPECTED The B2 inquiry is listed with its details.

☐ **E9 Bookings**

TEST Admin → Bookings → open one.

EXPECTED D3 bookings listed with traveller, reference, amount, status.

☐ **E10 Customers — verify / activate / deactivate**

TEST Verify an applicant (E/D2); **Deactivate login** on a customer, then try to log in as them; Activate again.

EXPECTED Verify → can purchase + email. **Deactivate** → **that customer can no longer log in** (active session dropped); Activate restores access.

☐ **E11 Settings — change admin password**

TEST Admin → Settings → “Send verification code” → current password + new + code → save.

EXPECTED Code emailed to the admin; password changes; you stay logged in.

☐ **E12 Admin responsiveness**

TEST Open the admin on a phone.

EXPECTED Top bar with hamburger; sidebar opens as a drawer; tables/cards reflow; no overflow.

☐ **E13 View site / Sign out**

TEST Use the sidebar “View site ↗” and “Sign out”.

EXPECTED Opens the public site / ends the admin session.

F Analytics

1 CHECK

☐ **F1 First-party web analytics**

TEST Browse a few **public** pages in a normal browser (not the admin) → wait a minute → reload the Admin dashboard.

EXPECTED The Web analytics panel shows non-zero views/visitors, a populated 14-day chart, and top pages. (Admin pages and bots are excluded from counts.)

G SEO & technical

6 CHECKS

☐ **G1 robots.txt**

TEST Visit `/robots.txt`.

EXPECTED Allows the site, disallows `/admin /api /account /pay /forgot-password /reset-password`, lists the sitemap, all on **your live domain** (confirms `NEXT_PUBLIC_SITE_URL` is set).

☐ **G2 sitemap.xml**

TEST Visit `/sitemap.xml`.

EXPECTED ~26 URLs (home, tours, destinations, about, contacts, custom-quote, every package, every destination) with hreflang for all 7 locales, on your live domain. Then **submit it in Google Search Console**.

☐ **G3 Social preview**

TEST Paste a page URL into a link-preview tester (or share on WhatsApp/Slack).

EXPECTED Title, description, and the Beyond Borders image (OG tags).

G4 HTTPS & security headers

TEST Confirm the padlock (valid SSL); optionally check response headers.

EXPECTED Headers include CSP, HSTS, `X-Frame-Options: DENY`, `X-Content-Type-Options: nosniff`.

G5 Responsiveness

TEST Spot-check home / tours / booking / login / register / admin at phone (~375px), tablet (~768px), desktop (~1280px+).

EXPECTED **No horizontal scrollbar**, readable text, tappable buttons.

G6 404

TEST Visit a nonsense URL.

EXPECTED A proper not-found page.

Live-specific reminders

Read once more before flipping anything to production.

Emails are real now — Every customer-side test sends to the address you used + `reservations@`. If they land in spam, check SPF / DKIM / DMARC for the sending domain.

Money is real if the gateway is live — Do the first end-to-end payment in **test mode**, and double-check the charged **currency/amount** before switching to live.

Currency note — Packages display **USD**; confirm `MPGS_CURRENCY` and the gateway charge the intended currency before taking real payments.
